	題名	High Frequency Vibration Analysis of Automotive Body Panelswith Damping Materials	
	掲載雑誌	Applied Mechanics and Materials, Vol.36:pp293-296	
	著者	<u>黒沢良夫</u> , 山口誉夫	
	概要	This technique can show the effect of the viscoelastic damping materials on the automotive body panels, and it enables the more efficient layout of the viscoelastic damping materials. Further, we clarified damping properties of the automotive body structures under coupled vibration between frames and panels with the viscoelastic damping materials.
